

ITEANZ Artificial Intelligence

Intensive Training Program for College Students

Empowering the next generation with foundational & practical AI skills

| PROGRAM OVERVIEW

02

Intensive Days

16

Hands-on Hours

10

Comprehensive
Modules

Designed to bridge the gap between AI concepts and real-world implementation.

| WHO IS THIS FOR?

Target Audience

- Engineering, Science, & Commerce Students
- Beginners interested in ML
- Aspirants preparing for AI Careers

Prerequisites

- Basic Computer Knowledge
- No Prior Coding Required
- Basic Mathematics (Optional)

| LEARNING METHODOLOGY

Instructor-Led

Interactive sessions guided by industry experts with deep domain knowledge.

Hands-on Labs

Real-time implementation using Jupyter Notebooks and Google Colab.

MODULE 1: AI INTRO

Evolution & Applications

Understand the history and trajectory of AI, comparing Narrow, General, and Super Intelligence.

Explore real-world impact across Healthcare, Finance, and E-commerce industries.

MODULE 2: MACHINE LEARNING

ML Concept

Key Paradigms

- ✓ Supervised & Unsupervised Learning
- ✓ Reinforcement Learning
- ✓ Training Data, Features, & Labels
- ✓ Avoiding Overfitting & Underfitting

MODULE 3 & 4: TOOLS & DATA

The AI Stack

- ✓ **Python:** Variables, Functions & Logic
- ✓ **NumPy:** Numerical Computation
- ✓ **Pandas:** Data Manipulation
- ✓ **Matplotlib:** Data Visualization

 Python Code

MODULE 5: ALGORITHMS

Algorithm Type	Name	Application
Regression	Linear & Logistic	Predicting values and categories
Classification	Decision Trees & KNN	Organizing data into defined groups
Clustering	K-Means	Finding hidden patterns in datasets

MODULE 6: DEEP LEARNING

Neural Architectures

Mimicking the human brain through Neural Networks. Introduction to TensorFlow and PyTorch frameworks.

Use cases in advanced Computer Vision and Natural Language Processing.

MODULE 7: GENERATIVE AI

Modern LLM Tools

- ✓ Large Language Models (LLMs)
- ✓ ChatGPT & AI Coding Assistants
- ✓ Prompt Engineering Techniques
- ✓ AI Image & Content Generation

| PROJECT & ETHICS

“

"The real challenge is not building AI, but building AI that is fair, ethical, and responsible."

Mini Project

Guided implementation of Spam Detection or Student Performance Prediction models.

Module 9: Ethics

Bias in AI, data privacy, security, and responsible implementation strategies.

CAREERS IN AI

Industry Roles

- Data Scientist
- ML Engineer
- AI Solutions Architect

"Join the AI revolution and receive your myTectra Certificate of Completion."
